Abstract

Private tutoring is teaching given face-to-face or in small groups outside an official educational environment such as a school. Private tutoring is a preferred method for students to seek further help in a particular subject or to improve their understanding in a particular area. For students who prefer a more focused learning environment or have difficulty understanding academic content, private tutoring is often an option. This research uses a qualitative method with a phenomenological type. The location of this research is the Dynamic Tutoring Institute, Jl. Imam Sujono No. 30, Sukun, Malang City. The data collection techniques used in this research were observation, interviews and documentation studies. The data analysis techniques used are data reduction, data presentation, and drawing conclusions. To check the validity of the data, researchers used source and time triangulation. The research results show the criteria that a tutor must have in terms of achievement, character and professionalism. Apart from that, this research also discusses student involvement in implementing tutoring activities. Based on the data obtained, various kinds of activities can be carried out by students involved in implementing home visit tutoring.

Keywords: Homevisit Tutoring, Student Involvement in Tutoring, Strategies to Increase Enthusiasm

1. Introduction

Education is a process of developing thought patterns by generating ideas or thoughts. Education is also an effort in the form of learning to develop one's potential (Masang, 2021). Education is very important to shape humans, society, and even the future of a nation. A person acquires the information, skills, and perspectives needed to grow and make constructive contributions to society through education. Additionally, education helps close the gap between socioeconomic classes and promotes cross-cultural understanding and provides access to a wider range of choices in life. Education aims to provide a solid foundation for society for a better future in addition to preparing them to face the here and now (Sinaga, et al. 2022). A person can gain the skills, information, and understanding needed to tackle difficult problems in an ever-changing world through education. Investment in education is an investment that will provide long-term results for the country, society and individual citizens. A person will be more likely to achieve personal goals and have a positive impact on social and economic progress if he or she has a proper education.

A student is someone who is taking part in a post-secondary education program that is considered a graduate who has the potential to increase human resources. In an educational environment where digital technology is widespread, students have an important role in contributing new ideas and discoveries to society. Students are the young generation who have enormous potential to play an active role in the advancement of various fields of science, including education. They must also be able to think critically and creatively. Because there are many obstacles that must be overcome, students must use digital technology wisely to advance the field of education. The most important component of education is students as agents of change. This means that to make changes in a country, students must have sufficient education

to broaden their horizons. A nation rich in wisdom will be developed. Due to the results of learning activities and the application of good values created by public and private experts, students also play a role in changes that were previously unknown.

The goal of tutoring is to help students reach their full academic potential by helping them identify their weaknesses and overcome learning challenges, improving their understanding of the material and their capacity to study it independently, and providing encouragement and support. In addition, the purpose of tutoring is to support students in strengthening their study techniques, becoming more independent, and feeling more confident when taking tests and completing assignments. There are many advantages of private tutoring that can support students in realizing their academic and personal goals

Looking at the background or reality in the field, researchers are interested in taking research regarding student involvement in organizing homevisit tutoring so that they can find out what role students play in increasing students' motivation or enthusiasm for learning through homevisit tutoring. Researchers also want to know more about the implementation process and what contributions students can make in increasing students' motivation or enthusiasm for learning through home visit tutoring. With this research, we will know how the process of homevisit tutoring takes place.

2. Method

The research uses a qualitative approach. The use of a qualitative approach with the phenomenological method is because the researcher wants to explain in detail the role of students in increasing students' enthusiasm for learning during home visit tutoring through the application of a pedagogical approach. According to Semiawan (2010), this qualitative method treats participants as subjects, not just objects. The qualitative method is a method that focuses on in-depth observation. Therefore, the use of qualitative methods in research can produce a more comprehensive study of a phenomenon.

Data collection techniques are one of the methods that researchers use to manage collected research data. Data collection techniques are a strategy in research when collecting data with established data standards (Sugiyono, 2017). In qualitative research, data can be in the form of words arranged into sentences. The Researcher Himself is the main instrument, or human. In this research, observation, interviews, and documentation were used as data collection methods.

3. Results and Discussion

3.1 Result

Criteria for Students Who Can Be Involved in Implementing Tutoring Online Homevisit

As the younger generation will become agent of change We should start having a good impact on the country. There are many things a student can do to contribute to bringing better change to the country. Juwita, M. in 2022 stated that it is inappropriate for students to only prioritize their own interests without making a contribution to their community, country or state, considering the variety of potential and opportunities they have. These students now only need to study; they are no longer employed by society or the government. Students should not isolate themselves from society because they have a position in it. To understand the progress of a student's struggle and contribution, it is necessary to define the student's role, function and position.

In implementing their knowledge, students can take part in many activities that can have an impact on the progress of the nation's life. One of them is taking part in the intelligence of the nation's children. Students can pass on the knowledge they have gained to students. There are many places for students to implement their knowledge with students. The Ministry of Education and Culture believes that the world will see Indonesia as the first country to have a high volume of students dedicating themselves to serve their country through their teaching contributions (Kemendikbud, 2021). One of them is becoming a tutor or mentor at a tutoring institution.

The nature and personality of a person greatly influences that person's life. This is because a person's traits and personality have a significant impact on various aspects of life, including social relationships, career and emotional well-being. Therefore, understanding the nature and personality of yourself and other people can help in self-development and better social interactions. This also applies to social activities or those related to other people. When you want to get good treatment from the environment around you, a person must also be able to give good treatment or characteristics to other people.

In the world of society, attitude is the most important point for approaching oneself. Someone usually likes to hang out with other people who have good and polite qualities and personalities. Therefore, a person must know how to behave kindly towards others. This also applies within the scope of work. It will be easy for someone to get a job if they have good qualities and personality. One of them is at the Dynamic Tutoring Institute. Mrs. DM, the owner of the Dynamic Tutoring Institute, stated that there are several criteria when a student wants to participate as a tutor at her tutoring institute. According to Mrs. DM and the two other sources, the criteria for a prospective tutor based on their character and personality include being friendly, painstaking, patient and also creative. Mrs. DM explained that tutors who want to join her tutoring institution must have a professional attitude. This aims to maintain the good name of the Dynamic Tutoring Institute and gain the trust of the surrounding community.

Student Involvement in the Process of Implementing Tutoring Online Homevisit

When providing learning guidance to students, of course a tutor will prepare himself first. The tutor must prepare whatever will be needed when

the tutoring takes place. Be it preparation within one's own knowledge, preparing learning media, planning learning methods and so on. This was also conveyed by Bartin in 2016, who stated that a tutor needs to prepare himself to carry out his duties guiding students. Planning methods and using effective learning media is an effort to create successful learning guidance. Therefore, tutors must understand how to use learning methods and learning media that are suitable for use.

There are several activities that tutors and students can do during tutoring. If students want to learn more or want to strengthen what they have learned in class, they can start by reviewing the material that has been taught. Tutors can then help students remember the material by providing practice questions or short quizzes to measure students' understanding. Apart from that, tutors are free to provide any additional material they wish to provide to students. Thus, tutors can also help students learn more.

Of course, parents have a responsibility to participate in helping their children with homework. To gather information about the growth of students' knowledge and skills, parents are often included in the monitoring and assessment process. In tutoring, evaluation seeks to ascertain the extent to which students have understood the subject that has been explained by the tutor. This also applies to tutors and Dynamic Tutoring Institutions. Evaluation and monitoring are always carried out to monitor the extent of students' understanding.

Student Strategies for Increasing Students' Enthusiasm for Learning Through Tutoring Homevisit

As tutors, of course they want the best for their students. On the other hand, several factors influence how motivated students are to learn. This has a huge impact on how effectively students learn. Because every student is different and has different interests and personalities, increasing students' enthusiasm for learning can be a challenge in itself. Therefore, tutors need to have a definite plan to deal with this problem. Increasing students' enthusiasm for learning is one of the strategies tutors implement to help students overcome their learning obstacles. When students are motivated, they do not need reinforcement from others to maintain their joy in learning. Therefore, tutors and children's parents are important actors in this situation. To increase student motivation to learn, each tutor must have a unique approach. Several strategies for tutors in an effort to increase student enthusiasm include giving quizzes, giving light practice questions, using interactive learning media. free time, as well as giving appreciation to students.

4. Conclusion

The criteria for a tutor based on their nature and personality include being friendly, painstaking, patient and creative. Friendly nature shows a warm, polite and friendly attitude in social interactions, making relationships more harmonious. A tutor must be friendly so that students feel comfortable and open. The painstaking nature shows attention and thoroughness in tasks, which is important in producing good work. Being diligent in teaching means being active in guiding students, according to their character. Patience to control oneself in difficult situations is needed in dealing with diverse students, so that teachers are easier to like. Creative nature means being able to generate new ideas and create an interactive learning atmosphere. Teachers and tutors must be creative in order to understand students with

various differences and use various appropriate learning media. Teachers must have creativity in understanding the importance of learning media to avoid student boredom and boredom in class.

There are several activities carried out by tutors and students during tutoring. Some of the tutor's activities during tutoring include re-understanding the material taught at school. Tutors are tasked with helping students re-understand material that has not been understood well. Apart from that, tutors provide additional material to improve student understanding. Apart from that, tutors also accompany students in doing homework to increase students' learning motivation. Apart from these activities, playing educational games is also done to refresh students' minds and learn knowledge in a fun way.

As tutors, they want the best for their students. Factors such as students' interests and personalities influence their learning motivation. Increasing students' enthusiasm for learning is a challenge, but important for learning effectiveness. Tutors need to have a proper plan to overcome these problems. Parents play a key role in increasing students' learning motivation. Tutor strategies include giving quizzes, light practice questions, and giving students a little free time. All of this aims to increase student enthusiasm and reduce boredom in learning
